COMET

- ▶ State Machine
 - ▶ Sub-state with well-defined permissions

- ▶ High availability

Serialized execution

- ▶ ~~High Throughput~~

Block proposal bottleneck

- ▶ High Integrity

- ▶ "Everyone" agrees

Cross-chain transactions

VOCABULARY

State Machine Replication	Blockchain
BFT Replicated State Machine System	Chain
State Machine	State Machine
State Transition / Transaction	Transaction
Log	Ledger
Object	Smart Contract
Batch of Transactions	Block
Replica / Learner	Full Node
Acceptor	Validator / Voter / Miner
Slot / Instance of Consensus	Height

ATOMIC COMMITMENT ACROSS CHAINS

- ▶ 2 chains (with finality)
- ▶ Different maintainers

ATOMIC COMMITMENT ACROSS CHAINS

- ▶ 2 chains (with finality)
 - ▶ Different maintainers
- ▶ One block for both chains
